

Other High-Tech Services

Litigation Supports

Risk3 provides professional advisory and tactical operational support in areas of:

- * Anton Pillar Orders
- * Expert Witness Testimony
- * Independent Analysis
- * Preservation & Presentation of Evidence

Digital Evidence Recovery

The ability to acquire, authenticate, preserve and analyze such data, wherever it may be stored, is becoming increasingly critical in civil and criminal investigations.

Risk3 also provides advisory consulting, analytical support and actual recovery on different storage media under various platforms such as computer hard drives, tape storage media, memory cards, CD & DVD Rom.

PDA & Mobile Forensics

Data today is being created at an unprecedented pace but unlike the past, more and more information is being stored not on paper but on computer media, video or audiotape and devices such as [personal digital assistants \(PDAs\)](#) and [mobile telephone handsets](#).

Each brand and model of different kind of devices require different methodology. To find out how Risk3 can assist you please feel free to contact us at one of the listed telephone numbers.

Risk3 – Your Forensics Partner in Asia

COMPUTER FORENSICS can be described as an art to **acquire, authenticate, preserve** and **analyze** electronic evidence recorded in various magnetic storage media.

The Emerging Need

As modern business practice evolves from traditional format of documentary records to electronic format of bit and byte, it is becoming increasingly critical in civil and criminal investigations.

Improper handling or an untrained response to a significant incident can result in evidence being irretrievably erased, corrupted or even missed because personnel on hand may not know where to look, what to preserve and thus let valuable information slip away.

Why can't my IT Department do this? The use of an independent computer forensics practitioner is critical to protect the integrity of the process, potential evidence and conflict of interests issue. Specific knowledge, training and experience are required for the process which allows no mistake.

Unrivaled Competences

Collection of digital evidence is crucial but covers only one aspect of the investigation, there is also the analysis and presentation of collected data. This analysis process, if conducted in a thorough manner by qualified and experienced professionals, is valuable not only because it provides critical results which are useful in prosecution but also because it can help identify new leads where an investigating party on may improve its resource deployments, procedures and processes for the matter on hand.

At Risk3, our key principals have over a decade of experience in advising strategic approach and provision of tactical support in the related areas in Asia.

In addition to the unsurpassed experience, our Asia-based multi-lingual team includes experienced personnel with backgrounds of forensic accounting, internal auditing, legal, IT administration, military telecommunications and information security.

This means not only we are able to be more effective in identifying the sources of information, we also understand the evidentiary value of different type of data and its important to a specific concern / incident.

It also enables us to advise realistic strategies on related investigation and recovery options.

Ultimately it is experience, dedication and understanding that makes the critical difference between an analysis that is merely perfunctory and that is truly insightful contributing success in later court or other actions.

Risk3 Discovery Process

Over the years, Risk3's qualified specialists have produced work product and professional testimonies to courts in various jurisdiction including **Hong Kong, Southeast Asian Countries and the United States.**

Unique Experiences

Risk3 has unsurpassed experience in providing strategic approach consulting and tactical support in dealing with the following situations:

- * Theft of proprietary information
- * Transnational Fraud Investigation
- * Work place misuse
- * HR related issues
- * Compliance concerns
- * Intellectual Property Infringement
- * Malicious email
- * Evidence preservation, recovery and analysis
